IDEA: https://www.jetbrains.com/idea/

1.从 eclipse 导入项目后有很多引用错误,

解决办法:修改一个配置,把 filesize 调大一点

Maximum file size

Maximum file size (kilobytes) IDE should provide code assistance for. The larger file is, the slower its editor works and higher overall system memory requirements are, if code assistance is enabled.

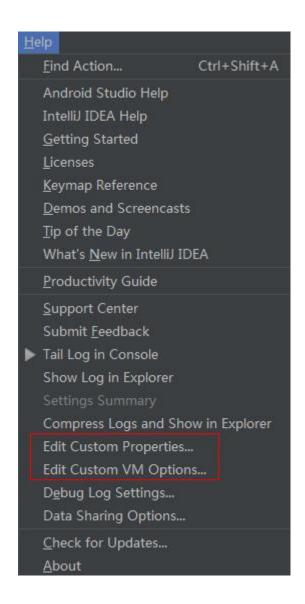

https://youtrack.jetbrains.com/issue/IDEA-

72543

Remove this property or set to a very large number, if you need code assistance for any files to be available, regardless of their size.

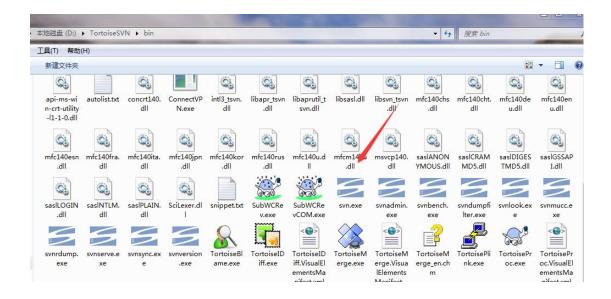

idea.max.intellisense.filesize=2500

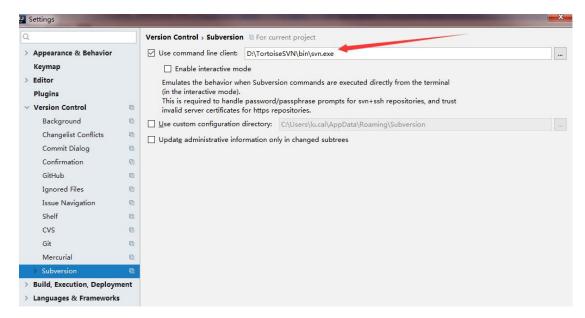

从 idea 界面可直接打开调整 filesize 和内存大小:

2.不能用 svn,

解决办法:设置一下 svn 路径,注意,本地 svn 安装时要把命令行装上,也就 是说要有 svn.exe 这个文件,没有的话,去下个 svn 最新版安装一下覆盖之前 的就有了,

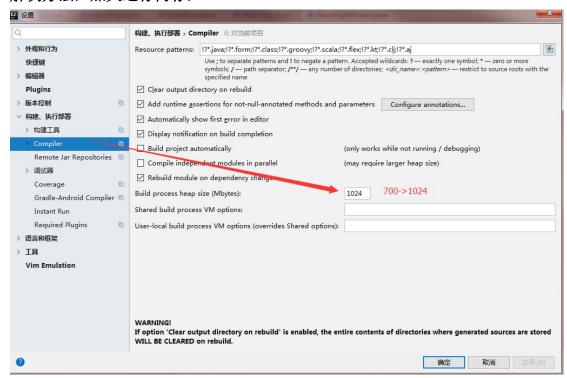

3.搜狗输入法卡,

解决办法: 更新输入法到最新

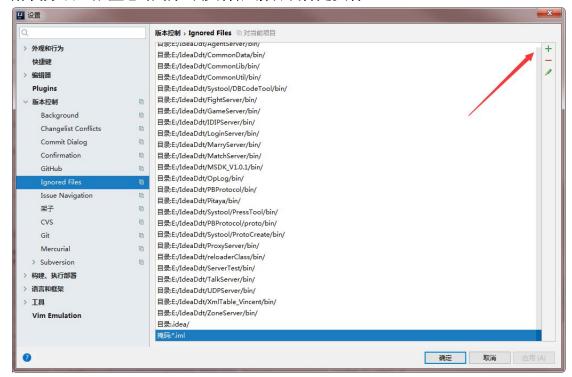

4.错误:java: OutOfMemoryError: insufficient memory

解决办法,加大运行内存,

5.svn 提交时过滤哪些是忽略的,

解决办法:配置忽略路径或文件后缀名或特定文件

6.汉化后发现许多毛病,比如 structure 里面没东西,run 的配置乱码等等,

解决办法: 不用汉包,汉化包有许多的问题

7.乱码

解决办法:

IntelliJ IDEA 2016.1\bin\idea64.exe.vmoptions

IntelliJ IDEA 2016.1\bin\idea.exe.vmoptions

都添加

(第一种) -Duser.language=en

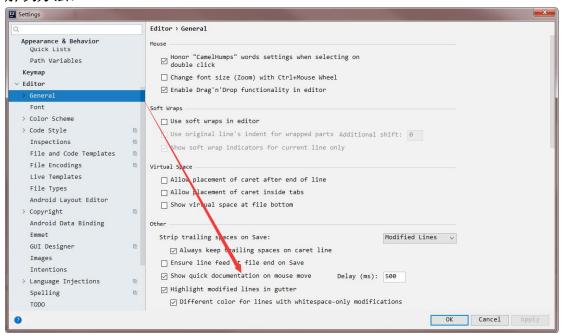

(第二种)

- -Duser.country=EN
- -Duser.language=us

-Dfile.encoding=UTF-8

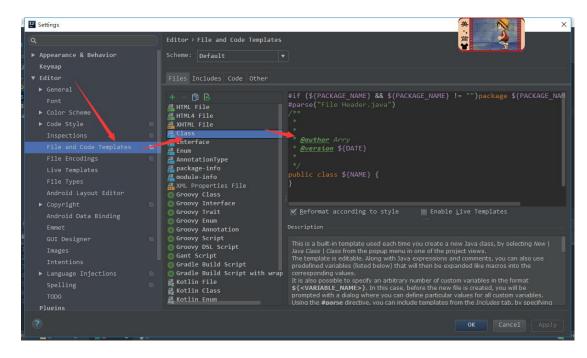

8.idea 鼠标放在变量上面不提示,

解决办法:

9.配置文件头,

解决办法:

/**

*

×

* @author Arry

* @version \${DATE}

*

*/

10.idea 调试快捷键

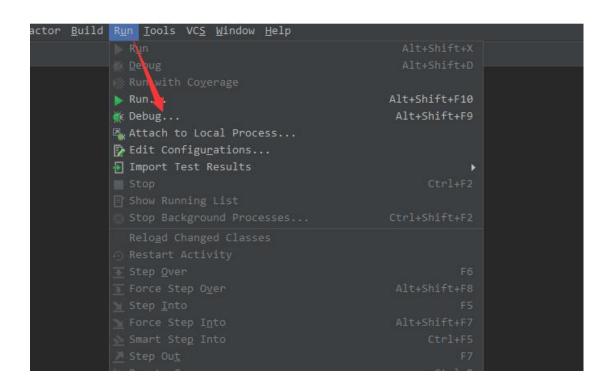

解决办法:

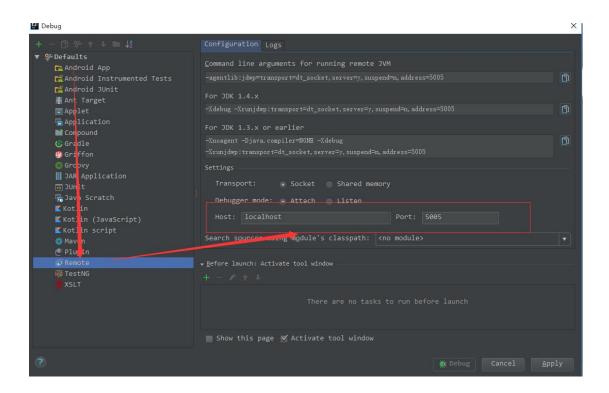

快捷键	介绍
F7	在 Debug 模式下,进入下一步,如果当前行断点是一个方法,则进入当前方法体内,如果该方法体还有方法,则不会进入该内嵌的方法中*
F8	在 Debug 模式下,进入下一步,如果当前行断点是一个方法,则不进入当前方法体内*
F9	在 Debug 模式下,恢复程序运行,但是如果该断点下面代码还有断点则停在下一个断点上*
Alt + F8	在 Debug 的状态下,选中对象,弹出可输入计算表达式调试框,查看该输入内容的调试结果
Ctrl + F8	在 Debug 模式下,设置光标当前行为断点,如果当前已经是断点则去掉断点
Shift + F7	在 Debug 模式下,智能步入。断点所在行上有多个方法调用,会弹出进入哪个方法
Shift + F8	在 Debug 模式下,跳出,表现出来的效果跟 F9 一样
Ctrl + Shift + F8	在 Debug 模式下,指定断点进入条件
Alt + Shift + F7	在 Debug 模式下,进入下一步,如果当前行断点是一个方法,则进入当前方法体内,如果方法体还有方法,则会进入该内嵌的方法中,依此循环进入

怎么说呢,反正我改成了 eclipse 快捷键,

11.远程调试

解决办法:和 eclipse 一样啦其实,

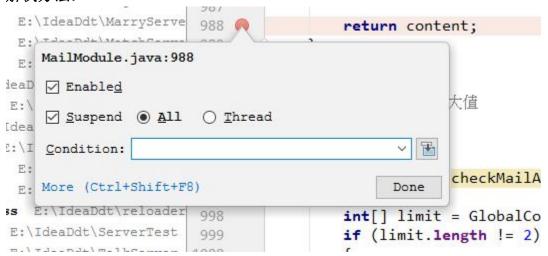

填上远程 ip 和端口,

12.条件断点

解决办法:

13.设置包头不 import*

解决办法:

It's obvious why you'd want to disable this: to force IntelliJ to include each and every import individually. It makes it easier for people to figure out exactly where classes you're using come from

Click on the Settings "wrench" icon on the toolbar, open "Imports" under "Code Style", and check the "Use single class import" selection. You can also completely remove entries under "Packages to use import with * ", or specify a threshold value that only uses the " * " when the individual classes from a package exceeds that threshold.

Update: in IDEA 13 "Use single class import" does not prevent wildcard imports. The solution is to go to Preferences (常中。on macOS / Ctrl + Alt + S on Windows) > Editor > Code Style > Java > Imports tab Set Class count to use import with '*' and Names count to use static import with '*' to a higher value. Any value over 99 seems to work fine.

14.无法输入(还没有找到能解决办法,也不是必现的,但经常的话会出现, 调时间容易出现)

解决办法: 听说点一下小黄点或者

15.设置文件级别注释

解决办法:

16.快速定位到某一行

解决办法: ctrl + L, ctrl + G

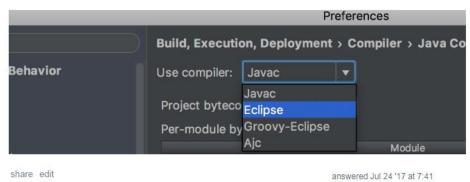

```
else
      case RankingType.RANK_WINSTREAK:
   if (group == 0 || group == 1)
      key = String.format("JGlobal:LadderWinStreakRank");
   else
      key = String Go to Line/Column
                                                     ×
   break;
case RankingType.RANI
  if (group == 0 |
      key = String
   else
      key = String. Tormac( Juliobal. &u. Lauder will Material A., group),
   break;
case RankingType.RANK_CHARM:
   if (group == 0 || group == 1)
      key = String.format("JGlobal:CharmSason:%d:CharmRank",
```

17.编译时 JDK 版本不对

解决方法:

I changed my compiler to Eclipse and run my project. Afterwards changed back to Javac and problem solved. I don't know exact problem but it can help who is looking for solution.

add a comment

18.快速大小写转换

解决办法: ctrl + shift + u

19.单击打开了文件,不想让其单击打开

解决办法:

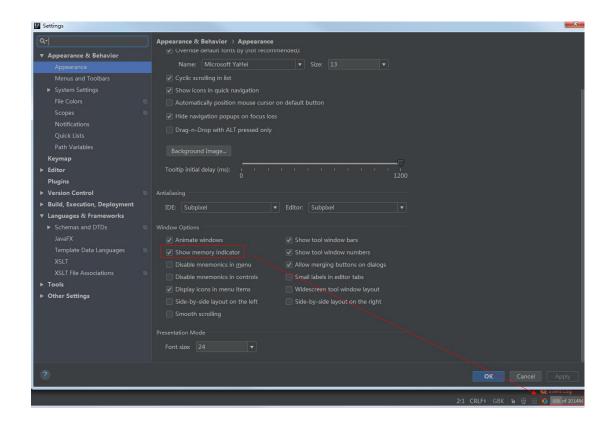

20.标签页重叠

解决办法:

Intellij IDEA 打开文件tab数量限制的调整

最近在阅读一个开源项目,发现IDEA对同时打开的文件TAB有限制,最多只能打开10个文件Tab,再多开就会把原来的Tab关闭了。 找了半天,在菜单中找到了调整方法,以Mac为例,调整路径为 "Intellij IDEA" -> "Perferences..." -> "Editor" -> "Editor Tabs",调整 Tab Closing Policy 的 Tab Limit,默认是10个,修改为你需要的个数即可。

21.直接查看内存够不够:

22.sumlime minimap 插件

CodeGlance

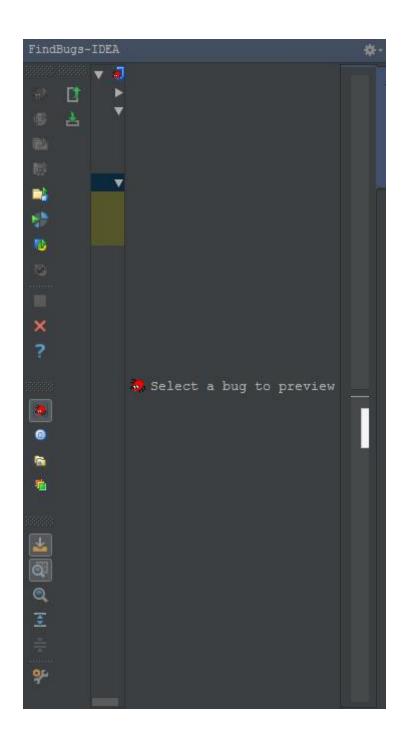

23.装逼背景插件

Background Image Plus

24.找 bug 插件

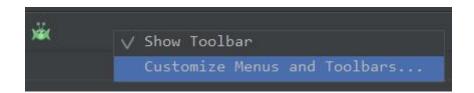

FindBugs

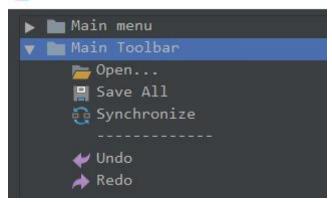

25.调试中查看某一表达式的值:

选中,alt + 鼠标左键

26.添加自定义菜单栏,打开文件所在位置:

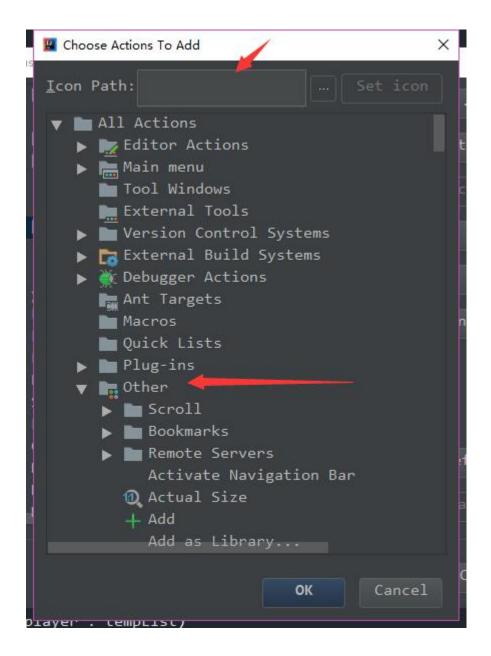

Menus and Toolbars

X ▶ MainToolBarSettings Add After... UI Designer Toolbar Actions Add <u>S</u>eparator 🕨 🖿 Android.MainToolBarSdkGrou Search Everywhere Remove Switch Task... Move Up Show in Explorer Editor Popup Menu Move <u>D</u>own Editor Gutter Popup Menu Editor Tab Popup Menu Project View Popup Menu

27.清理导入:

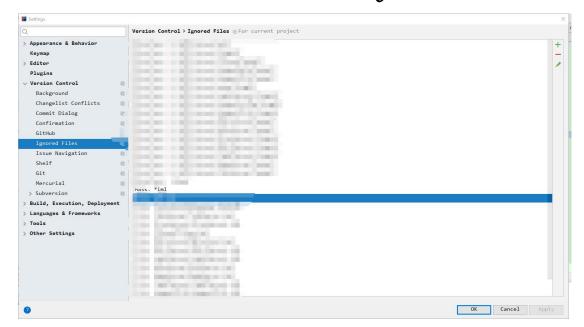

ctrl + alt + o

28.批量修改变量名:

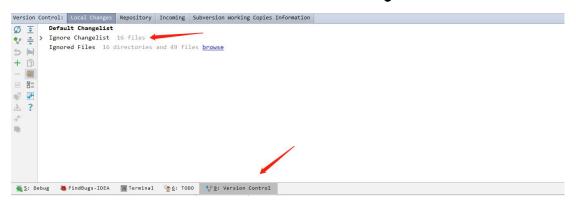

shift + F6

29.设置 svn 忽略的 2 中方式:

(1) 若文件还没有进入到版本,直接添加 svn 的 ignore

(2) 若文件已经进入到版本管理,则通过新建 changelist 来解决

30.continue.....
